

Jiixin An

A user experience researcher focusing on conversational agents. Experienced in qualitative and quantitative methods. Skilled at translating user insights into actionable design recommendations for AI-powered systems. Passionate about designing empathetic, accessible, and inclusive technologies.

EDUCATION

University of Texas at Austin — *Ph.D. in Information Studies*

AUG 2021 - PRESENT

- Interview older adults to understand their attitudes toward using LLM-powered information agents
- Review 1000+ publications to understand the development of conversational agents for older adults' health
- Review 1000+ publications to understand the practices of UX design for AI explainability
- Analyze interviews of 25 students to understand their attitudes and use of ChatGPT in their learning
- Collect and analyze longitudinal information-seeking data (3 months per participant) to understand their everyday information-seeking practice for health
- Survey 600+ patients with fibromyalgia to understand their mobile app use behavior in health management

Peking University, Beijing, China — *B.S. & M.S., Library Science; B.S., Psychology*

SEP 2014 - JUN 2020

- Interview 16 Chinese parents of children with ASD (Autism Spectrum Disorder) after 2-month observation to understand their information practice that supports their caregiving.

INDUSTRY EXPERIENCE

Xiaomi Technology, Beijing, China — *User Research Intern*

APR 2021 - JUL 2021

- Log analysis combined with literature review, survey, and interview to explore how voice assistant XiaoAI influences mobile phone purchases.
- Content analysis of 500+ Weibo posts to support the training of XiaoAI's public sentiment monitoring system. This project was selected as a "Quality Star" program in 2023.

Ferrum Health, San Francisco, CA — *User Research Intern*

JUL 2018 - AUG 2018

- Interview six Chinese physicians to understand their perspectives on AI-powered CT scanners and the possibility of introducing products to China.

Didi Chuxing, Beijing, China — *Product Manager Intern*

JUL 2017 - JAN 2018

- Interview 10 drivers and 17 riders to understand the value that motivates them to stay on the platform.
- Log analysis to understand drivers' behavior patterns to design the algorithm that motivates them to work at specific time periods.
